

WHEN ONE SHOT MATTERS

**KILIMANJARO'S PROMISE** to our customers is to produce the finest full custom rifles, crafted by the world's best gunsmiths and stockmakers, utilizing the highest quality materials and adhering to the most exacting standards. **WE ARE COMMITTED** to Strength, Beauty and Accuracy — one custom crafted rifle at a time.

**WHEN ONE SHOT MATTERS,**

Erik D. Eike  
President, Kilimanjaro Rifles

“ The custom rifle makers are among the most interesting of all the exhibitors. The one that stood out for us, above all of the others, and we mean no disrespect, were the Kilimanjaro rifles of Erik Eike... Erik’s rifles are truly magnificent... In short, Jim would be willing to sell all of his hunting rifles to own just ONE of Erik’s guns; they are that good.”

⊕ **Dr. James Cleary**  
Guns & Shooting Online. February 2010

“ Those I’ve had the pleasure of testing in 6.5-284 Norma and .416-300 WSM shot better than they looked and looked good enough to get down on one knee and propose to.”

⊕ **Ron Spomer**  
American Rifleman Patriot Review, August 2009

“ Erik Eike, President and founder of Kilimanjaro Rifles, understands the romance of hunting... Kilimanjaro starts with beautiful Turkish walnut and then offers upgrades so beautiful they can break a man’s heart... Both Kilimanjaro rifles rate right up there among the most accurate I have ever had the pleasure of shooting... that kind of accuracy does for your shooting confidence what Viagra is supposed to do for your sex life. Sing ho for Africa and golden joys!”

⊕ **Jameson Parker**  
Texas Sporting Journal, September & November 2010

“ My favorite of favorites.”

⊕ **John Barsness**  
(Serengeti Walkabout Rifle) Rifle Magazine, November 2007

KILIMANJARO STEALTH LAMINATION

## Custom Rifles

### Introducing The Kilimanjaro Family Of Rifles.

While we create works of exhibition quality and beauty, our focus is always on the field — rifles which look good and hunt better — the working tool as art. We set out to achieve our goal through the finest craftsmanship, exact attention to detail, **Stealth Lamination** to provide superior strength and stability, match-grade tolerances, and stringent accuracy and reliability standards.

#### ACCURACY

Strength, beauty and accuracy – they are each important in every Kilimanjaro creation. For the hunter, one shot does truly matter. The success of that shot will depend much on the hunter’s skills, but dependable accuracy of the rifle is also key. At Kilimanjaro, we maintain a rigorous quality assurance and testing program to ensure the accuracy of our rifles.

Our exact wood to metal fit, precision in-letting and proper bedding of both action and barrel are all done by hand in the most labor intensive part of our production effort. Each rifle is different, and must be carefully tuned to achieve excellence. With the stability of the wood achieved through our Stealth Lamination process, we begin with exact mating of the action and barrel to the stock. Full barrel conditioning (break-in) is then conducted, and your rifle undergoes its initial accuracy testing before we proceed with finishing and coating. Once your rifle is complete, your rifle is tested/tuned again to ensure its accuracy, with its final load development. Test targets for the recommended load come standard with your rifle. Our accuracy standards are sub-MOA for even the largest bores, and 0.5 MOA is what we strive to achieve.

#### QUALITY ASSURANCE

Kilimanjaro’s quality assurance program is second to none. Our rifle builders are the first line in this program. They are selected not just for their skill but their attention to detail and understanding that the creation of the finest rifles is not merely a feat of engineering or craftsmanship, but an art form. Their work, however, must pass inspection by our Quality Control Team at virtually every stage of the production process. Your rifle does

not proceed to the next step, until the quality of the step before has been verified. Our tester and our President provide the final levels of quality assurance. Only when all of these exacting standards are met does your rifle ship to you.

#### PRODUCTION SCHEDULE

Our standard production schedule for custom wood-stocked rifles is twelve months from date of first deposit, subject to action availability.

#### LIFETIME GUARANTY

Befitting a rifle of the highest quality, Kilimanjaro extends a lifetime guaranty to the original purchaser on its rifles. Our guaranty covers our labor and craftsmanship, including our Stealth Lamination. We stand behind our rifles. If you ever have a problem, contact us. If we cannot help you solve the problem, we will have you return the rifle for whatever corrective action is necessary.

#### PAYMENT TERMS

Kilimanjaro Rifles accepts most forms of payment, including check, wire transfers, Visa, MasterCard and American Express, whichever is most convenient for you. A deposit of 50% is required upon order to secure a production slot and allow the ordering and procurement of all the special components for your rifle. A second payment of 25% is due upon commencement of rough carving and action/barrel work. The final 25% is not due until your rifle is ready to ship. Because of our custom production effort, and limited production slots, deposits and progress payments are non-refundable.

#### WEBSITE

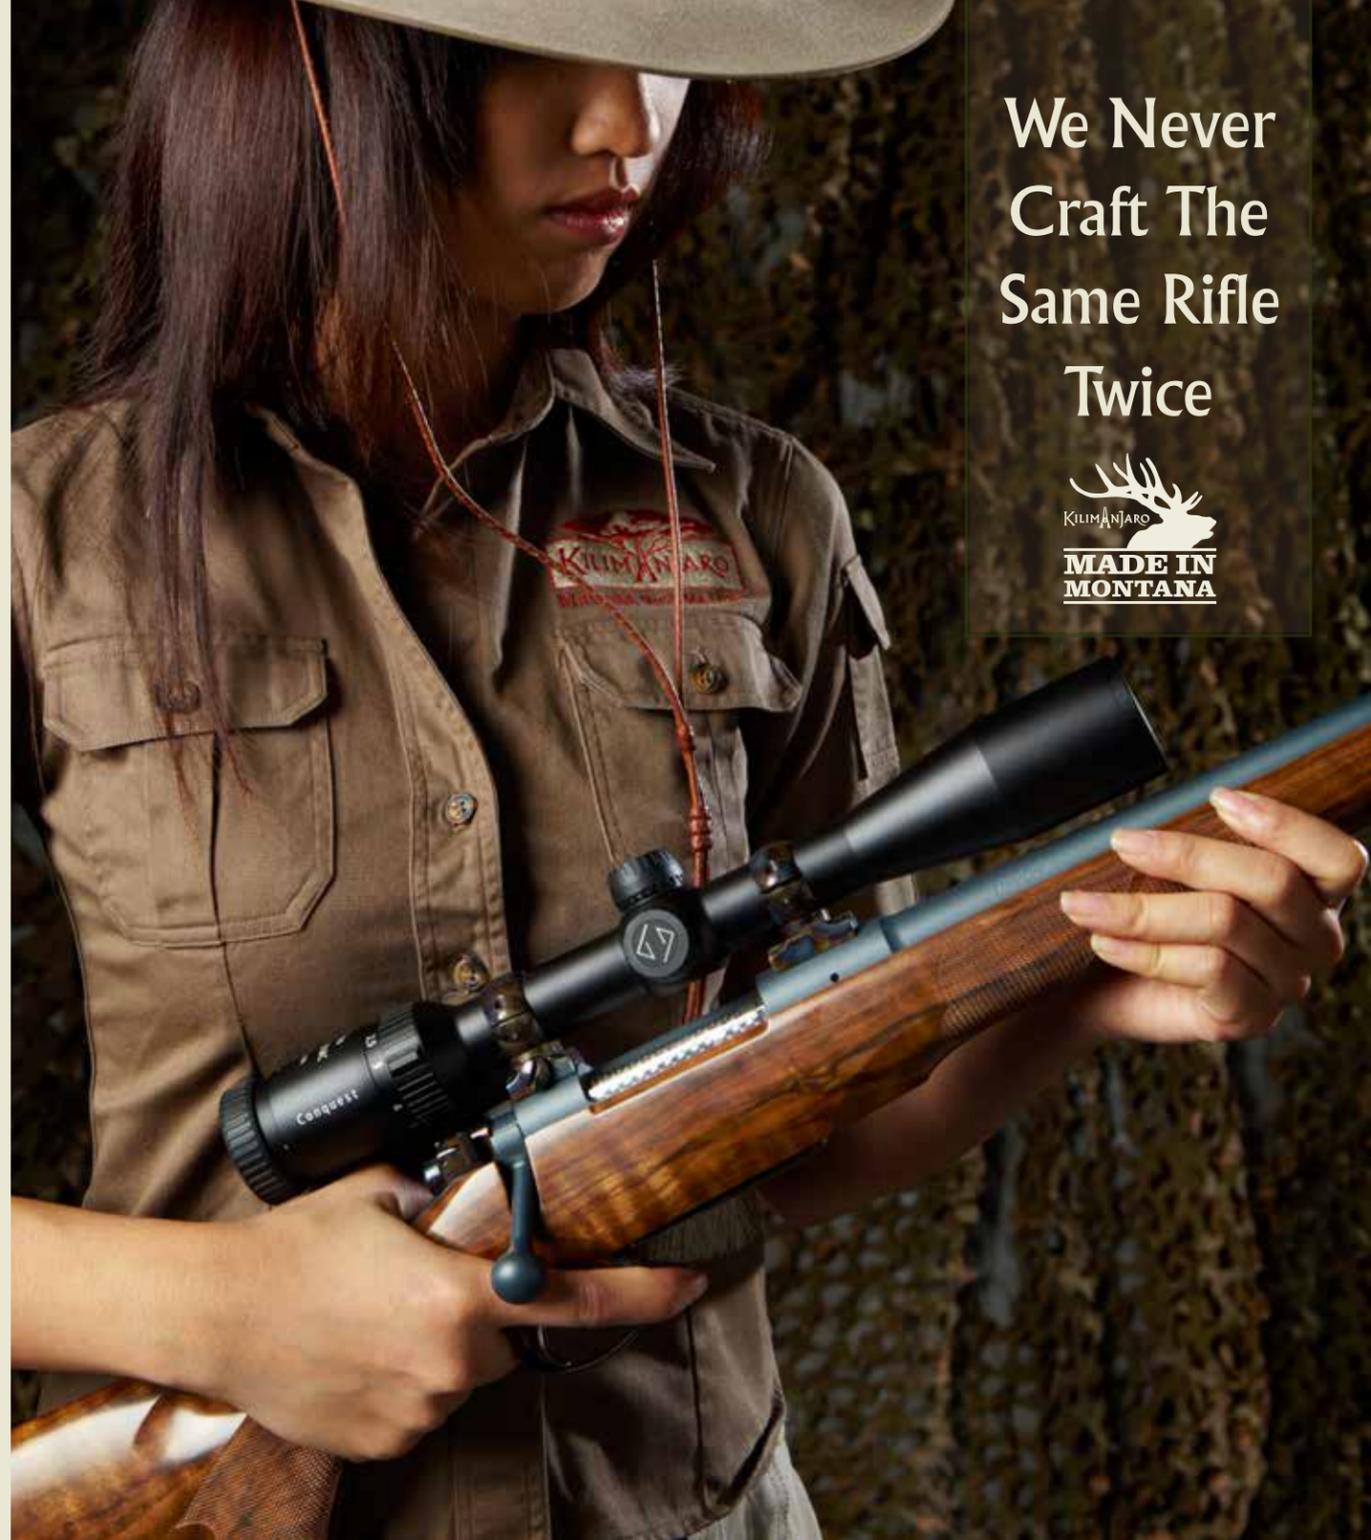

Please see our website at KilimanjaroRifles.com for more information, and the latest photographs, news, reviews and pricing.

“To think that you can enter a field as traditional and crowded as custom rifles and expect to make a significant splash takes a bit of naiveté, a significant dose of faith and a hell of a bunch of work.”

Erik Eike and the whole crew at Kilimanjaro have all that and more. Their full-blown custom Kilimanjaro rifle is, as advertised, “The Pinnacle of Strength, Beauty and Accuracy.” From its marbled Turkish Walnut Stealth Laminate stock with Diamond Fleur wrap-around checkering to its lifetime guarantee, the Kilimanjaro bespeaks classic quality and performance. Its graceful, well-proportioned lines and precise wood-to-metal fit foreshadow its balance and slick handling qualities. Its stainless steel, match-grade barrel is softened by a deep, rich, protective metal coating that marries the look of traditional bluing with the durability of rust-proof, space-age ceramic. And, of course, each rifle is tailored to its buyer. Whether chambered for a traditional, all-round cartridge like the .30-06, a flat-shooting super magnum or a dangerous game big bore, the Kilimanjaro rifle proves that old adage: There’s always room at the top.

We Never  
Craft The  
Same Rifle  
Twice

## OUR CUSTOM PROCESS

### We Never Craft The Same Rifle Twice.

Unlike most rifle makers, or even so-called “custom” rifle makers, Kilimanjaro Rifles provides full custom rifles tailored to your individual specifications and desires. We intend each and every rifle we make to be unique.

Full custom can be a daunting proposition, however, no matter your level of experience or certainty of what you want. We have a variety of different starting points designed to make the process easier.

#### 1 CALIBER & CARTRIDGE

Our inquiry begins with what and where you hunt, what and where you want to hunt, or what you envision doing with your rifle. From there, we can help you determine the best cartridge and general configuration for your rifle, and you may discover it is not the one you thought.

#### 2 STOCK & GEOMETRY

A basic choice up front is between The Kilimanjaro Rifle, our more affordable Serengeti Rifle, or one of our specialty rifles like The Doctari, Artemis or Tigercat. These are still just launching points for the full customization of your rifle. The Kilimanjaro represents our flag-ship offering with Special Select Circassian walnut as standard, choice of premium actions, our premium checkering, and more components like iron sights featured as standard.

Selecting a wood blank for your rifle is one of the most important choices, and usually one of the most enjoyable. With Kilimanjaro, you don’t just select a grade of wood, but pick your actual wood blank from the pictures on our website, or which we locate

specially for you.

Another early choice to be made is whether you prefer a Hunter style Monte Carlo comb, an American style straight comb, or some other comb variation. From there, we can help you choose the basic form of your stock through our selection of many

different starting “Geometries” which can be seen under our Features page. These starting Geometries are designed to assist you in getting the approximate shape, weight and contours you desire for your rifle, and then we can fine-tune the final shape to your specifications.

#### 3 TECHNICAL CONFERENCE

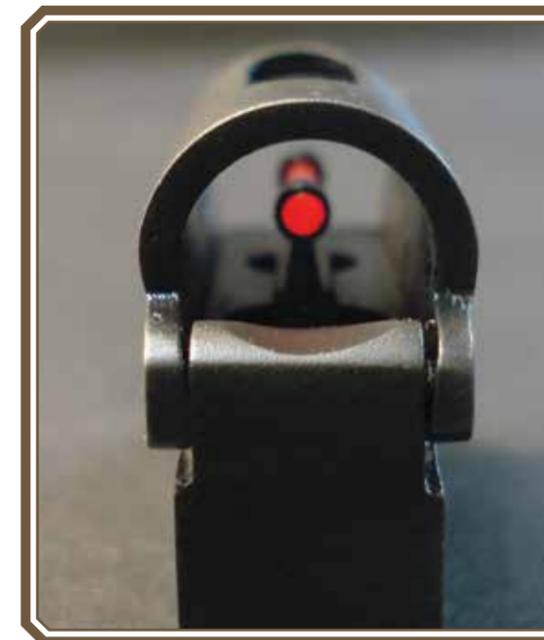

Once you have made the decision to purchase, we promptly schedule the first technical conference to go over the many details and choices for your rifle.

#### 4 FABRICATION, ASSEMBLY AND FINISHING

Once all components are on hand, and the rough-carved stock has properly acclimated, we schedule another technical conference with you to confirm the details before full production begins. From there, you will receive regular status updates and progress photos so you can follow your rifle’s creation.

#### 5 WOW!...

...is what we hear from most of our customers when they first lay eyes and hands on their Kilimanjaro rifle. Find out why.

# Invisible Strength And Incredible Beauty

“ I was remiss in not offering congratulations to you and to your talented team in bringing Kilimanjaro Rifles to this point, where it has earned the respect and admiration of amateur and professional hunters and outdoor writers alike. That is no surprise. The high class and superior performance of the rifles reflects the class act you are as a team.”

⊕ **Dick M.**  
December 2010

“ **A couple of comments:**

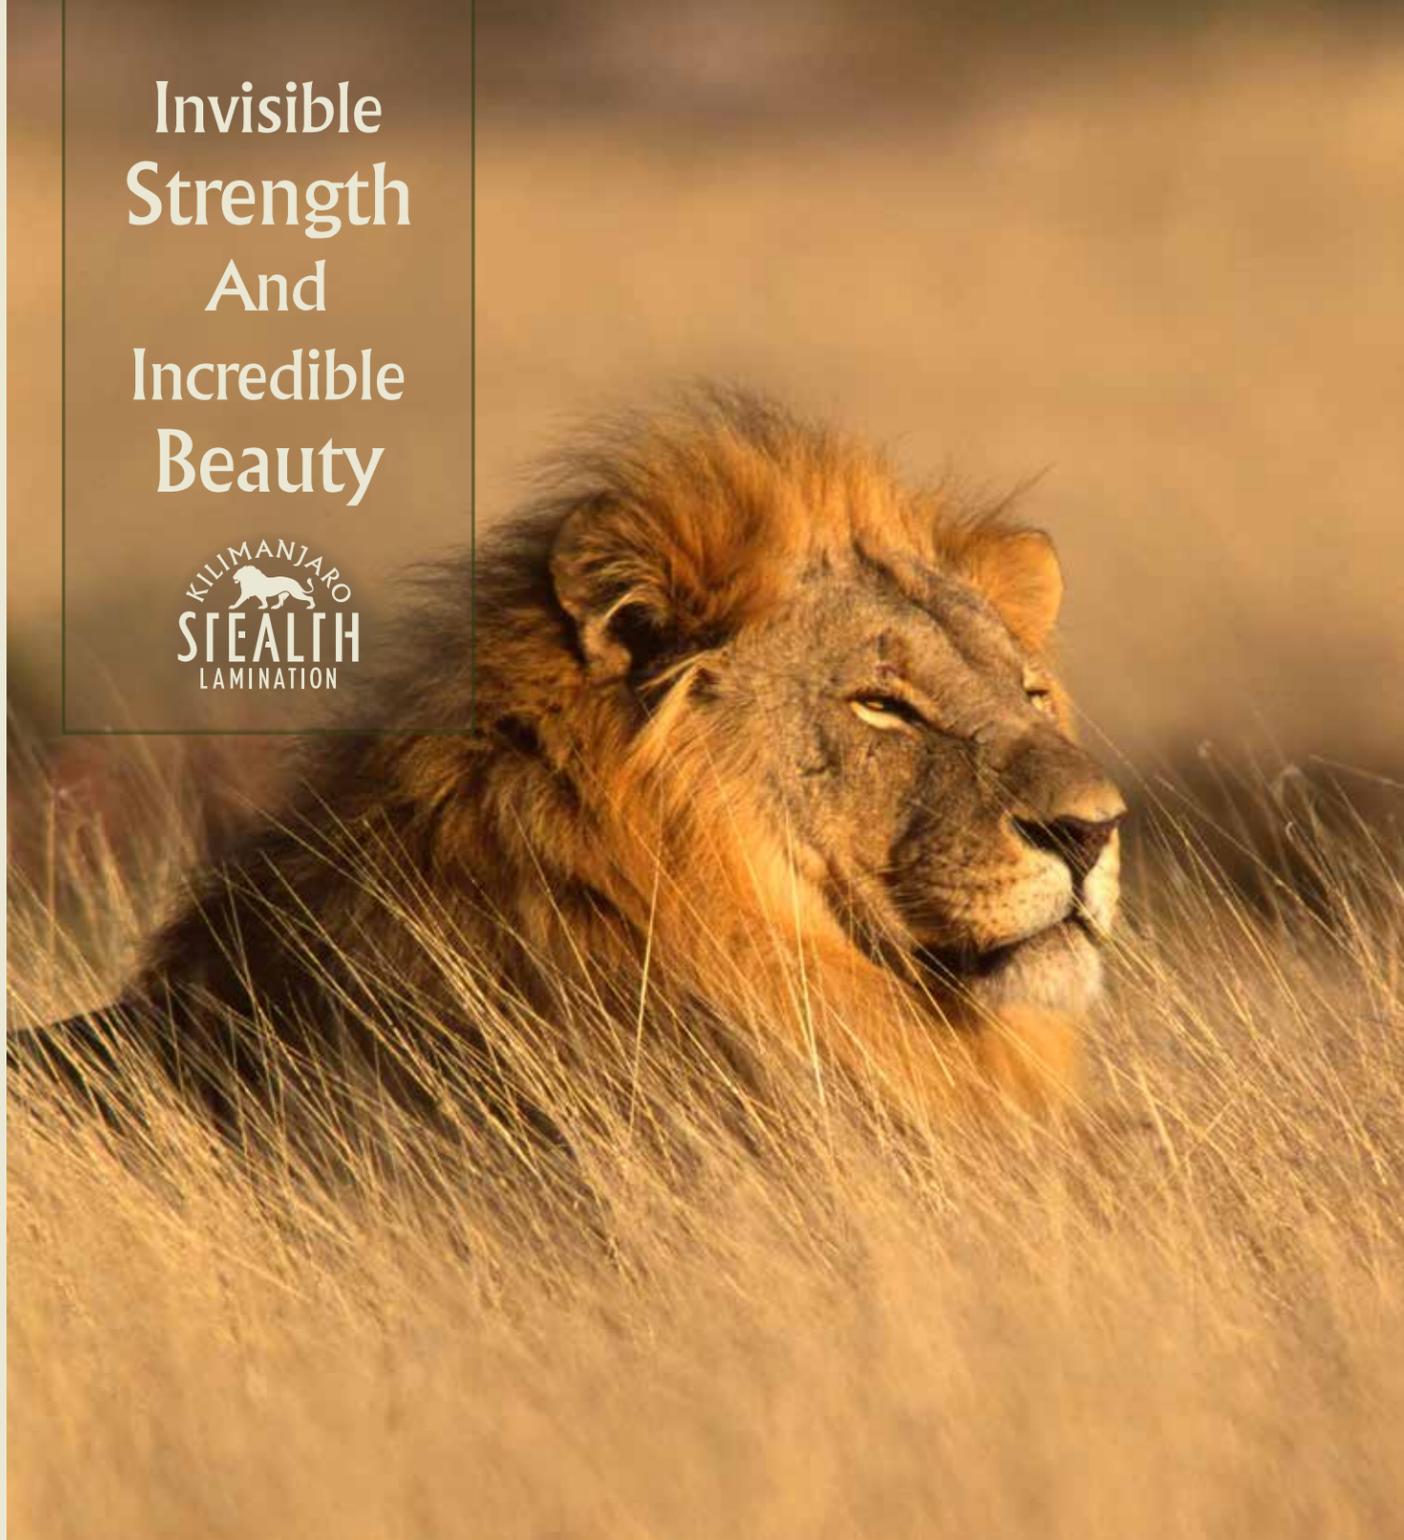

#1-----The presentation of the rifle in the case when opened is very impressive. It's very hard not to say WOW!! as you open the lid. The inclusion of loading data, target, ballistic data along with the other paperwork and soft case is a show of class. Not counting the heavy duty lockable airline proof hard case.

#2----- There is a reason you have the title of Master Gunsmith. The workmanship, fit and finish of both metal and wood is flawless. I can't imagine anyone not appreciating your talents.

#3----- The wood is some of the best I have ever seen. The joints where the lamination is can only be seen if you look very hard and even then it would have to be pointed out to someone if they didn't know about it.

Great job-----I can't imagine or even want to think about ever sliding it into a Saddle scabbard. However, I know it is made to go hunting and will probably shed a tear with the first scratch.”

⊕ **Chub E.**  
June 2011

## STEALTH LAMINATION

### Invisible Strength And Incredible Beauty Together At Last

**KILIMANJARO'S PROPRIETARY STEALTH LAMINATION**

**Invisible Strength and Incredible Beauty Together at Last.** Kilimanjaro specializes in the production of fine, solid wood rifle stocks. What sets our stocks apart (aside from our extraordinary workmanship) is our proprietary Stealth Lamination technology. It increases the strength and stability of the wood while offering the discriminating sportsman the beauty and feel of a solid wood stock virtually impervious to the accuracy-robbing warping effects of temperature and moisture changes.

Not only does our lamination technology preserve the full figure and beauty of the solid wood, it also allows us to enhance it. We are able to choose the most desirable grain and figure from within the blank (as revealed from our plank cuts) and fold that to the outside of both sides of the stock, while re-orienting and strengthening the grain with the middle plank. Extensive experimentation and tweaking have allowed us to perfect this technology over the last 15 years.

The Stealth Lamination process starts with the selection of a solid wood stock blank. We must first “true-up” the surfaces of this blank so that they are exactly parallel and the blank is of precise uniform thickness. Next, we must carefully examine the grain pattern on all sides of the blank to evaluate and judge what is happening to the figure inside. To properly orient the ultimate lamination with the center axis of the stock, we also have to plan and allow thickness for desired cheek-piece, cast-

off, etc. Once this planning is complete, we slice the solid blank into three planks. Now we can see the beauty of the grain inside the blank, and fold the best grain to the outside so that both sides of the eventual stock will feature similar grain and figure. By keeping the outer planks thicker, and the middle plank thinner, we achieve “stealth” of the lamination as both sides of the eventual rifle stock will not show the lamination lines; those will be visible only by looking carefully at the top or bottom

of the butt-stock. The interruption and reorientation of the grain between the planks achieves much greater strength and stability than un-laminated solid wood. The next step is the surface preparation of the planks for lamination, and is the most critical to the success and strength of the process. The planks are then bonded under 50,000 pounds of pressure.

Stealth Lamination technology provides stability, durability, accuracy and weather resistance equal or superior to conventional laminated and synthetic stocks without the “plywood” look of

other laminated stocks, or the “plain Jane” look and artificial feel and sound of synthetic stocks. The patented process singles us out in the industry, and is the core of our ability to provide Exhibition Beauty in a rifle designed for and capable of rugged field use. For more than fifteen years and counting, our Stealth Lamination stands up to and masters the harsh conditions of the field, providing superb performance and sublime beauty.

### ACTIONS

**IN KEEPING WITH OUR ALL CUSTOM - ALL THE TIME PHILOSOPHY,** Kilimanjaro will build your rifle on the action of your choice, including virtually any commercially available or customer provided action.

No matter what action you choose, Kilimanjaro modifies and refines the action to meet our exacting standards for smooth and reliable operation, optimum accuracy, improved recoil resistance and aesthetic beauty. When we are finished, you will have a superior Kilimanjaro quality action.

#### AVAILABLE ACTIONS INCLUDE:

**Kilimanjaro Improved Sako 85 Action** – An elegant and highly dependable action with smooth, quiet bolt travel, reliable feed, a relatively short angle of bolt lift, a secure but detachable magazine allowing for instant unloading and loading, and controlled round feed. Available only in right hand versions.

#### Kilimanjaro Improved Kimber 84M, 84L & 8400 Actions

– Once we have refined it, we are able to achieve superior accuracy with these actions which feature claw-type extraction, full controlled-round feed, Sako-style bolt release and a 3 position shroud mounted safety. Available only in right hand versions.

**Granite Mountain Action** – We are pleased to also offer our customers our improved and refined version of the Granite Mountain actions, available in both left and right hand versions. In the tradition of the Mauser 98, the Granite Mountain is a superb choice for the largest magnum cartridges.

**Dakota 76 Action** – Our refined version of the Dakota 76 action provides an elegant improvement on the basic Mauser & Winchester Pre-64 designs, with controlled round feed, claw extractor, three-position horizontal shroud safety, and a flush hinged bolt release. Available in both right and left hand versions.

We also offer Kilimanjaro improved versions of the Weatherby Mark V, Browning, Ruger, Winchester and Remington actions.

### BARRELS

**Kilimanjaro uses only the highest quality match-grade barrels** from the finest barrel makers, including Shilen, Pac-Nor, Lilja and Douglas, but you can specify the barrel maker of your choice. We recommend and use stainless barrels primarily, but can craft your rifle with either a chrome-moly or stainless steel barrel as you prefer. Barrel length, contour, twist and type of crown are all determined with you during our technical conferences. With Kilimanjaro, the choice of barrel makers is not as important as it is with other rifle makers. Why? Because we test each and every rifle to verify its accuracy, and thus the quality of its barrel. At times, we find unsatisfactory barrels from all makers, and when we do, we re-barrel as part of the testing and tuning process for your rifle.

### WOOD FINISH

The beauty and durability of our “Museum Grade” wood finish is second to none. Requiring almost two months to perform, and up to 20 different coats and cure periods, our rifles are expertly finished to provide a finish free of any defect as inspected through 4x magnification. The finish is then carefully treated for glare reduction to optimize it for field use. You may specify whether you desire a satin, semi-gloss or high gloss final surface treatment.

While objects of beauty and elegance, our rifles are designed and intended to hunt, and to do so in the harshest conditions anywhere in the world. Do not let its beauty deter you. Our Stealth Lamination provides the strength and stability for any conditions, our metal finish is the toughest and most protective, and our wood finish is similarly designed to take the rigors of the hunt.

### STOCKWORKS

**Do you have a favorite rifle that deserves a better stock?** Just choose the ‘Customer Provided Barreled Action’ credit option on any our rifle models, and watch your trusted hunting companion transform into true Kilimanjaro excellence to your specifications.

### CERAMIC METAL COATING

All of our rifles come standard with our ceramic metal finish. This is a tough ceramic base coating baked onto the metalwork under high heat which provides excellent corrosion protection, smooth operation of metal parts, and a durable no-mar finish. It is the toughest and most durable we have found and impervious to all solvents and cleaning solutions we have tried. It provides a beautiful and elegant non-glare finish which looks as good at exhibition as it performs in the field. You can choose from many colors, but our custom Kilimanjaro Black (which closely matches the matte black of Zeiss & Swarovski scopes) is our most popular. Sniper Grey also makes for an elegant rifle, as does the Stainless color which can dramatically show off the lighter shades of our Circassian Walnut.

In addition to our ceramic coating, we also offer the more traditional finishes of bluing (satin or high-polish), French Gray treatment, color case hardening and bead-blasting.

### WOOD BLANKS

Kilimanjaro Rifles prides itself on offering the finest Circassian Walnut stock blanks, but we also offer Claro Walnut, Bastogne Walnut, Maple, Purpleheart, and other woods for your individual rifle creation. Our available blanks can be inspected on our website at KilimanjaroRifles.com. At Kilimanjaro, you do not just select a grade of wood, but your own special blank.

### DELUXE DELIVERY PACKAGE

**Kilimanjaro's focus is always on the field and on the hunt.** This focus extends to our delivery package. No cardboard boxes, cheap or flimsy plastic cases or impractical wood/velvet display cases here. No — we deliver your custom rifle in a custom ballistic nylon field case with the Kilimanjaro logo proudly embroidered, as well as a separate matching bolt/accessories case. Step up to our Deluxe Delivery Package, and your rifle and these field cases are carefully fitted into a top of the line

Pelican 1750 or Boyt double rifle case ready to withstand a million miles of the toughest treatment any airline, freight company, baggage handler or safari staff can throw at it.

**CHECKERING**

All of the checkering on Kilimanjaro's fine wood stock custom hunting rifles is exactly done by hand. Choose traditional peak & valley, fleur-de-lis, geometric flares, our special trademark Diamond Fleur checkering, or a pattern designed just for you. The Kilimanjaro Rifle comes standard with the beautiful fine-line Diamond Fleur wrap-around checkering, featuring a unique blend of fleur-de-lis accents complimenting an elegant geometric diamond convergence.

**ENGRAVING**

A full range of custom engraving services are available from Kilimanjaro's superlative engravers. Whether simple initials, moderate ornamentation or full, life-like game scenes and images, we will prepare sketches for your approval. Like our custom hunting rifles, each engraving design is a one of a kind creation just for you.

**LEATHERWORKS**

Kilimanjaro Leatherworks offers a fine compliment to your Kilimanjaro rifle. Our talented saddle makers design and produce full custom leather accessories for your rifle. You can choose from one of the designs we already have available, or have us create a new design just for you. Full-tooling, complete with initials, names or imagery is available, as are exotic leather inlays, or simple but elegant decorative stitching.

## GEOMETRIES

**Kilimanjaro's wood-stocked rifles are all full custom and not the semi-custom limited selection of choices offered by most custom rifle makers.** Kilimanjaro offers a wide variety of stock geometries designed to be a useful starting point for your individual customization and specifications. Most geometries can be offered in a "Hunter" style elegant Monte Carlo stock, a straight-combed "American" style stock, or something else to suit your personal choice.

### OUR STARTING GEOMETRIES INCLUDE:

**The African** – Our premier full-weight rifle geometry best suited to cartridges of 7mm. Rem. Mag. and higher, all the way up to 458 Lott and 338 Lapua. The African provides the necessary weight for comfortable recoil management and improved stability of aim.

**The Walkabout** – When less is more. Perhaps Kilimanjaro's most elegant offering, and Kilimanjaro at its best. Not exactly a light rifle; perhaps "concise" is a better word. No long magnums here, and few short ones. We like to keep the weight in the area of seven pounds

or less and thick heavy barrels aren't the answer. There are many great cartridges out there, just waiting to be wrapped in a big game or varmint rifle that will spend more time on your shoulder or in your hand than in the back of a truck.

**The TigerCat** – A high-end, lightweight rifle that once picked up, you just can't seem to put down. The Kimber 84M and 84L actions allow us to bring this rifle geometry to fruition. We designed the TigerCat stock to be slender, trim and elegant, and usually under 6 pounds. A rifle that is a joy to carry as well as shoot.

**The Artemis** – The Goddess Of The Hunt. For The Huntress/Sportswoman – the Artemis represents an offering unique to Kilimanjaro. Designed by women for women, it is a classic profile with toe-out and special cast in the butt-stock to move the recoil pad away from critical areas of the feminine anatomy. An open grip is moved forward to correctly position smaller hands for accurate trigger positioning. A quick-handling rifle where weight and bulk are kept to minimum.

**The Doctari** – Designed by Dr. Kevin Robertson, a legend in the hunting world with combined expertise in

game anatomy, professional hunting and bullet/cartridge performance, the Doctari Professional Hunter stock geometry is suitable for the largest dangerous game cartridges, including the 505 Gibbs. Designed for ease of carry, quick deployment, immediate sight acquisition, proper recoil management, and the balance and quick handling of a fine shotgun, the Doctari geometry represents a distillation of Dr. Robertson's extensive experience with dangerous game.

**The Leopard** – The Leopard is another classic profile but with slimmer open grip and fore-end. Slight rise along the comb with minimum drop at heel. A mountain rifle type of stock suitable for cartridges up to .416 Rem.

**The Early European** – A slender and elegant stock geometry which harkens back to older European stock designs. It features a slender forearm with a Schnabel tip, slender wrist, and a gently falling comb line. The Early European geometry is most suitable for cartridges up to the 30-06 class.

**The Kodiak** – The Kodiak is designed to provide a quick pointing iron sights platform (but also with scope) for use in dangerous game rifles. Modernized

classic profile with large full grip and fore-end. The grip incorporates a palm swell and a subtle flare at the cap. A stout grip and heavy fore-end allows for maximum control of heavier calibers such as .416 Remington and .458 Lott, as well as the timeless and easier to manage 375H&H.

**The Red Mist** – As the name implies, this rifle is bad news for varmints. The Red Mist is an expression of the ideal varmint platform. This geometry is designed to support long, heavy barrels, fluted or otherwise. The fore-end is equally at home on the bag or a bipod. The grip is full, somewhat closed and features an ambidextrous palm-swell. The forearm can be standard or beaver-tailed to the width desired.

**The Merlin** – Also known as "The Montanan", this geometry is a distillation of fifty years of stock-making by Merlin (Mel) Smart. It is a classic, full-weight profile with an open grip and full-sized rounded fore-end suitable for all cartridges.

**Mannlicher** – Not really a geometry, but a full length stock extension on the other geometries. The Mannlicher can be built on almost any action and in just about any caliber. Typically, these look best when kept shorter, preferably a 20" to 22" barrel length. A TigerCat Mannlicher is a trim and elegant styled rifle for our discerning customers, but an African or Walkabout Mannlicher is equally attention grabbing.

# THE KILIMANJARO RIFLE

The Pinnacle Of Strength, Beauty & Accuracy

- STANDARD FEATURES**
- + Full Customization To Your Specifications
  - + Choice Of Premium Actions
  - + Stealth Lamination
  - + Special Select Circassian Walnut Stock
  - + Museum Grade Wood Finish
  - + Diamond Fleur Premium Hand Checkering
  - + Exact Wood To Metal Fit
  - + Match Grade Stainless Barrel
  - + Ceramic Metal Coating

## TIMELESS BEAUTY LETHAL ACCURACY

The Kilimanjaro Rifle is our flagship offering, and is hand-crafted to be handed down generation to generation. As a full custom bolt-action rifle, every detail, component and feature (from stock geometry, choice of action and barrel, and other features) is subject to customization and your individual specifications. The base package set forth below is simply the starting point for your own unique rifle.

As our flagship, every element of the Kilimanjaro Rifle incorporates the best of the best, and all joined by the finest craftsmanship in the world. Premium actions such as the Granite Mountain, Dakota 76, Sako 85 and Kimber 84M, 84L and 8400 are all standard, but you may choose from any commercially available action. The Kilimanjaro Rifle features a fully customized Circassian Walnut stock fit precisely to your specifications, dimensions and desires in accordance with our "All Custom - All

The Time" philosophy. The Kilimanjaro Rifle also features our Stealth Lamination, premier Diamond Fleur checkering, Museum Grade wood finish, and NECG iron sights as standard.

Starting from your choice of one of our many standard stock geometries, we then customize that geometry to your individual specifications.

The Kilimanjaro Rifle also comes standard with bolt jewellery, shadow-line cheek piece, Ebony or Ironwood fore-end tip and grip cap, two action cross-bolts with Ebony or Ironwood caps, Dakota style in-let swivel studs, Pachmayr Decelerator recoil pad in your choice of thickness and color and Talley Quick Detachable scope rings & bases. Many other options are available on request.

# THE SERENGETI RIFLE

Field Utility With Gallery Beauty

- STANDARD FEATURES**
- + Kilimanjaro Quality & Beauty
  - + Choice of Actions
  - + Stealth Lamination
  - + AAA Grade Walnut Stock
  - + Deluxe Wrap-Around Checkering
  - + Diamond Fleur Premium Hand Checkering
  - + Exact Wood To Metal Fit
  - + Match Grade Stainless Barrel
  - + Ceramic Metal Coating

## KILIMANJARO EXCELLENCE MORE AFFORDABLE PRICE

For those hunters that cannot yet afford to treat themselves to our flagship Kilimanjaro Rifle, the Serengeti Custom Hunting Rifle — new for 2013 — features all of Kilimanjaro's quality, strength, beauty and accuracy, but at a lower starting price than our flagship by utilizing fine American Walnut, simpler checkering, more affordable actions and a few features made options rather than standard. Like our flagship Kilimanjaro Rifle, however, it features full customization ability, and our premium Museum Grade wood finish. Classic deluxe wrap-around fine-line checkering (all done by hand) is standard, but with many other checkering options. Standard actions include your choice of the Winchester Model 70 or Kimber actions, but almost all actions are available as an option.

Featuring our proprietary Stealth Lamination for superior strength and stability, the Serengeti Custom Rifle is available in your choice of virtually any chambering, right or left hand, Monte Carlo or straight comb, in any of our stock geometries, all of which can be further customized and fit to your specifications. Chambering from 22-250 to 458 Lott (and all stops in between) is possible with the standard actions. With upgraded action options, the Serengeti Rifle can be chambered all the way up to the massive 505 Gibbs cartridge.

With a full lifetime guaranty to the original purchaser, and Kilimanjaro's exhaustive quality assurance and testing program on each and every rifle, the Serengeti Custom Rifle offers true Kilimanjaro excellence at a lower cost.

# THE DOCTARI RIFLE

Africa's Most Dangerous Demand The Perfect Shot

THE DOCTARI RIFLE

- STANDARD FEATURES
- + Granite Mountain Action
  - + Stealth Lamination
  - + Special Doctari Sights
  - + Special Select Circassian Walnut Stock
  - + Museum Grade Wood Finish
  - + Premium Diamond Fleur Checkering
  - + Exact Wood To Metal Fit
  - + Match Grade Stainless Barrel
  - + Ceramic Metal Coating

Designed by Dr. Kevin Robertson, a legend in the hunting world with combined expertise in professional hunting, game anatomy, and bullet/cartridge performance, Kilimanjaro Rifles is proud to introduce the Doctari Professional Hunter Rifle available in 505 Gibbs, 450 Rigby, 458 Lott, 416 Rigby, and 416 Rem. Perfected for ease of carry, quick deployment, proper recoil management, immediate sight acquisition, with the balance and quick handling qualities of a fine shotgun, the Doctari Professional Hunter Rifle represents a distillation of Dr. Robertson's extensive experience with dangerous game.

Kilimanjaro's signature beauty and Stealth Lamination of an exquisite Circassian Walnut stock for strength and accuracy are combined with the finest Mauser-style bolt-action and match-grade barrel. Impressive to hold and deadly on the hunt, the Doctari Rifle is for those moments when dangerous game is truly dangerous.

The Doctari Rifle is crafted on the superb Granite Mountain action with integral Talley-style mount bases machined into the double square bridge receiver. For sights, Kilimanjaro designed its own fully adjustable ghost ring rear sight (which mounts to the Talley base in the receiver) combined with a special hinged-hood fiber optic front sight, for the fastest sight acquisition. Unique to Kilimanjaro, this design puts iron sights

and scope on the same level of eye alignment so that the comb line of the stock works equally well for both. No more pressing down hard to try to use iron sights, or lifting your face off the comb to see the scope.

The long open grip in the "Prince of Wales" style is designed to allow comfortable shoulder carry (shot-gun style) over long distances when the need to pivot the rifle into position and shoot immediately could occur any instant. Kilimanjaro's proprietary Stealth Lamination gives the highly figured wood stock the strength to handle these most extreme cartridges, but we also provide no less than three action and grip cross-bolts for even more strength.

The Doctari Rifle comes standard with a thickened butt-stock eliminating the need for a cheek-piece and for proper recoil management. It also comes standard with bolt jewelry, Ebony or Ironwood forearm and cross-bolt caps, Dakota style inlet rear swivel stud and barrel band, Pachmayr Decelerator recoil pad in your choice of colors, and Talley QD scope mounts. Wood upgrades, engraving and many other options are available on request.

## THE DOCTARI RIFLE

### AFRICA'S MOST DANGEROUS DEMAND

# THE PERFECT SHOT

## THE ARTEMIS RIFLE

For The Goddess Of The Hunt

- STANDARD FEATURES**
- + Designed For The Female Form
  - + Choice of Actions
  - + Stealth Lamination
  - + AAA Grade Walnut Stock
  - + Deluxe Wrap-Around Checkering
  - + Exact Wood To Metal Fit
  - + Match Grade Stainless Barrel
  - + Ceramic Metal Coating

**Designed By Women For Women** — The Artemis represents an offering unique to Kilimanjaro for a market unfairly ignored since the time of its namesake. Crafted with the female form in mind, it features a classic stock geometry with toe-out and special cast in the butt-stock to move the recoil pad away from critical areas of the feminine anatomy, and an open grip moved forward to correctly position smaller hands for accurate trigger positioning. Other feminine attributes are the trim, slim mountain rifle shape designed to provide a quick-handling rifle where weight and bulk are kept to a minimum.

The Artemis Rifle features our proprietary Stealth Lamination, a AAA Grade American Walnut Stock, deluxe wrap-around fine-line checkering all done by hand, our Museum Grade wood finish, and Kilimanjaro's exact wood to metal fit for supreme accuracy.

Your choice of the Kimber or Winchester Model 70 actions is standard, but any commercially available or customer-provided action can be used for your Artemis Rifle as an option. The Artemis comes with a match grade stainless steel barrel, Kilimanjaro's premium ceramic metal coating, and rigorous quality assurance throughout the production process. Full barrel conditioning and loaddevelopment with test target are standard.

The Artemis Rifle also comes standard with bolt jewellery, shadow-line cheek piece, Ebony or Ironwood fore-end tip and grip cap, two action cross-bolts with Ebony or Ironwood caps, Dakota style in-let swivel studs, Pachmayr Decelerator recoil pad in your choice of thickness and color, and Talley Quick Detachable scope rings & bases. Anything your heart desires is available on request.

## THE TIGERCAT RIFLE

When Even Less Is More

- STANDARD FEATURES**
- + Delightfully Compact & Light Weight
  - + Kimber 84M or 84L Actions
  - + Stealth Lamination
  - + AAA Grade Walnut Stock
  - + Deluxe Wrap-Around Checkering
  - + Exact Wood To Metal Fit
  - + Match Grade Stainless Barrel
  - + Ceramic Metal Coating

**The Tigercat Rifle is our high-end, lightweight wood-stocked rifle that once picked up, you just can't seem to put down.** The Kimber 84M & 84L actions allow us to bring this rifle geometry to fruition capable of handling both 308 and 30-06 class cartridges. We modify these actions to achieve Kilimanjaro quality and precision, constructing our own recoil lug, shaving off weight, smoothing and polishing the action components, and barreling with a custom contour that makes the action and barrel look like it was machined from a single block of metal. We designed the Tigercat stock to be slender, trim and elegant—a rifle that is a joy to carry as well as shoot.

The Tigercat Rifle features our proprietary Stealth Lamination, and a AAA Grade Walnut Stock with wood upgrades available. Other standard features include our deluxe,

fine-line wrap-around checkering, and our Museum Grade wood finish.

A match grade stainless steel barrel, ceramic metal coating, and rigorous quality assurance throughout the production process are provided. Full barrel conditioning and test target are standard. The Tigercat comes with bolt jewellery, shadow-line cheek piece, Ebony or Ironwood fore-end tip and grip cap, two action cross-bolts with Ebony or Ironwood caps, Dakota style in-let swivel studs, a Decelerator recoil pad, and scope rings & bases. Anything your heart desires is available on request.
